New LvL ONE® Finish

More eye-catching solutions for customers

The Alcoa LvL ONE® finish gives the wheel a very attractive look, with a smoother and glossier surface than the basic Alcoa Brushed finish. And this combined with all the other advantages you expect from Alcoa wheels.

Availability: as from Q2, 2016 on all standard Alcoa wheel sizes. It joins the "Brushed" and "Dura-Bright® EVO" finishes as one of three solutions Alcoa offers to commercial vehicle markets.

Alcoa LvL ONE® wheels provide significant benefits to drivers and commercial fleets.

- Attractive, with a smoother and glossier surface than Brushed
- Five times stronger than steel, resulting in less damage and repair downtime
- Up to 47% lighter, resulting in increased payload capacity, cooler running temperatures as well as significant fuel and cost savings
